

GAME NOS. 935, 936 & 937
JANUARY, 1981

MIDWAY'S **RALLY-X** **PARTS AND** **OPERATING MANUAL**

#935-UPRIGHT

#936-COCKTAIL

#937-MINI

MIDWAY MFG. CO.

A BALLY COMPANY

10750 WEST GRAND AVENUE
FRANKLIN PARK, ILLINOIS 60131
U.S.A.

PHONE: (312) 451-1360

CABLE ADDRESS: MIDCO

TELEX NO.: 72-1596

GENERAL INSTRUCTIONS FOR RALLY-X UPRIGHT

INSTALLATION

1. Remove shipping cleats located on bottom of cabinet.
2. Install four (4) provided leg levelers to bottom of cabinet and level cabinet.
3. The power is controlled by a switch located on top of the cabinet. Additional taps have been provided on the transformer to compensate for fluctuating line voltage.
4. Upright only - To remove protective paper coating from decal - each side of cabinet, soak paper with water to soften and carefully start "peel back" of paper with fingernail. Peel paper parallel to cabinet side. "DO NOT PULL OUT".

LINE VOLTAGE SAFETY SWITCH

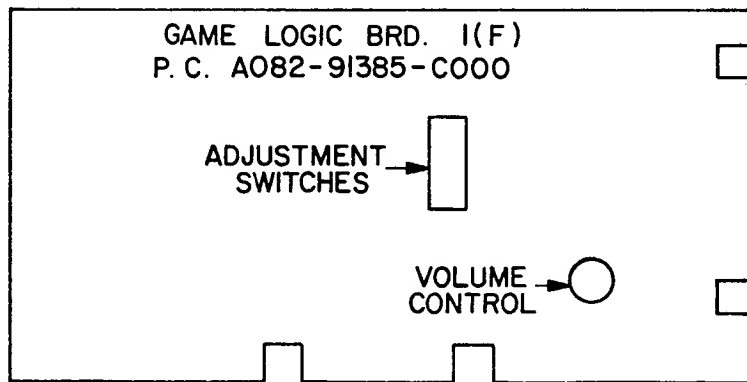

A line voltage safety switch has been provided for your protection. It is located on the right rear side of the cabinet in the back door area. When the back door is removed, it opens the circuit to the line voltage. To restore power (when servicing), pull switch fully out.

VOLUME CONTROL

The volume control pot is located on the Game Logic Board (P.C. A082-91385-C000). This pot controls the volume of all sounds and may be varied as desired by rotating pot control.

ADJUSTMENT SWITCHES

Located on Game Logic Board (P.C. A082-91385-C000) and may be adjusted as indicated on separate instruction card in back box area.

TO REMOVE CONTROL PANEL AND MONITOR DISPLAY GLASS

1. Open coin door.
2. Release two (2) clamps located below Control Panel on each side of cabinet.
3. Disconnect control panel jack.
4. Remove control panel.
5. Remove monitor display glass.

CREDIT PUSH BUTTON SWITCH

Located in cash box area and is readily accessible by opening coin door. This switch is provided as a test aid and awards one credit without advancing coin meter.

WARNING: This equipment Generates, Uses and can Radiate Radio Frequency Energy and if not installed and used in accordance with the Instruction Manual, may cause interference to Radio Communications. As temporarily permitted by Regulation it has not been tested for compliance to Subpart J or Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference. Operation of this equipment in a Residential Area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

M051-00935-A003

GENERAL INSTRUCTIONS FOR RALLY-X MINI

INSTALLATION

1. Remove shipping cleats located on bottom of cabinet.
2. Install four (4) provided leg levelers to bottom of cabinet and level cabinet.
3. The power is controlled by a switch located on the back of the cabinet. Additional taps have been provided on the transformer to compensate for fluctuating line voltage.

LINE VOLTAGE SAFETY SWITCH

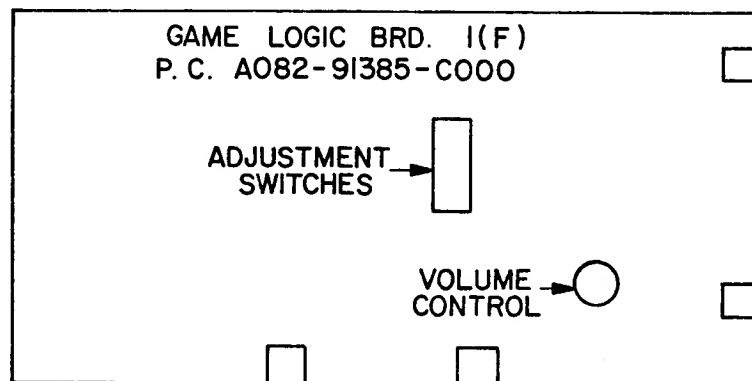

A line voltage safety switch has been provided for your protection. It is located on the right rear side of the cabinet in the back door area. When the back door is removed, it opens the circuit to the line voltage. To restore power (when servicing), pull switch fully out.

VOLUME CONTROL

The volume control pot is located on the Game Logic Board (P.C. A082-91385-C000). This pot controls the volume of all sounds and may be varied as desired by rotating pot control.

ADJUSTMENT SWITCHES

Located on Game Logic Board (P.C. A082-91385-C000) and may be adjusted as indicated on separate instruction card in back box area.

TO REMOVE CONTROL PANEL AND MONITOR DISPLAY GLASS

1. Open coin door.
2. Release two (2) clamps located below Control Panel on each side of cabinet.
3. Disconnect control panel jack.
4. Remove control panel.
5. Remove monitor display glass.

TEST SLIDE AND CREDIT PUSH BUTTON SWITCH

Located to right of cash box and is readily accessible by opening coin door. When placed in "ON" position, this switch indicates test mode. The credit push button switch is provided as a test aid and awards one credit without advancing coin meter.

GENERAL INSTRUCTIONS FOR RALLY-X COCKTAIL TABLE

INSTALLATION

1. Remove shipping cleats located on bottom of cabinet.
2. Install four (4) provided leg levelers to bottom of cabinet and level cabinet.
3. The power is controlled by a switch located on the bottom of the cabinet. Additional taps have been provided on the transformer to compensate for fluctuating line voltage.

LINE VOLTAGE SAFETY SWITCH

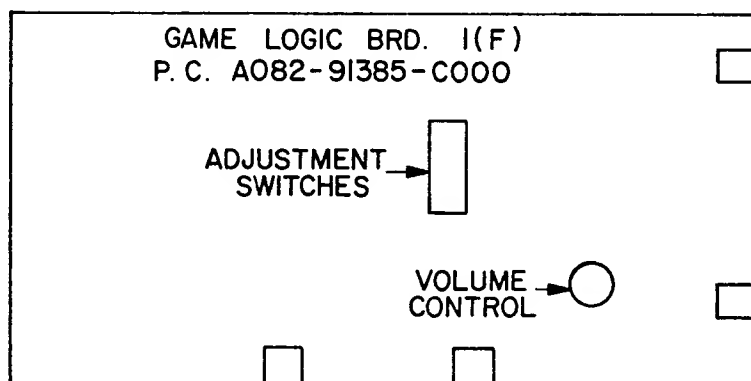

A line voltage safety switch has been provided for your protection. It is located in the cabinet on the left side of the coin door. When the coin door is opened the circuit to the line voltage is interrupted. To restore power (when servicing), pull switch fully out.

VOLUME CONTROL

The volume control pot is located on the Game Logic Board (P.C. A082-91385-C000). The pot controls the volume of all sounds and may be varied as desired by rotating pot control.

ADJUSTMENT SWITCHES

Located on Game Logic Board (P.C. A082-91385-C000) and may be adjusted as indicated on separate instruction card in back box area.

TEST SLIDE AND CREDIT PUSH BUTTON SWITCH

Located to the right of cash box and is readily accessible by opening coin door. When placed in "ON" position, this switch indicates test mode. The credit push button switch is provided as a test aid and awards one credit without advancing coin meter.

TO SERVICE MONITOR, GAME BOARD AND TRANSFORMER ASSY.

1. Open coin box door and release two (2) clamps indicated on sketch below.
2. Grasp monitor mounting panel at "A" and open as indicated in sketch below.

Caution: Due to the weight of the monitor extreme care must be exercised when opening cabinet for service.

ELECTRICAL BULLETIN:

FOR ALL APPARATUS COVERED BY THE CANADIAN STANDARDS ASSOCIATION (CSA) STANDARD C22.2 NO. 1, WHICH EMPLOYS A SUPPLY CORD TERMINATED WITH A POLARIZED 2-PRONG ATTACHMENT PLUG.

CAUTION:

TO PREVENT ELECTRIC SHOCK DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION:

POUR PREVENIR LES CHOCS ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR. UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

CAUTIONARY NOTES IN SETTING UP PROCEDURE

Care in Setting Up

1. Place machine a sufficient distance from the wall and on a strong, level surface.
2. Do not place in dusty or damp locations or where the sun's rays will beat directly on the machine. Also, in order to avoid the interior of the machine's overheating, do not place near heaters.
3. Do not place in front of emergency or fire exits or in front of locations where fire fighting equipment or extinguishers are stored.
4. Make sure the ground wire on machine is connected to the ground.
5. Check to see whether all of the connectors on the PC boards, etc. are connected.
6. Check if the electric power switch is turned "ON", and game is plugged in.

Caution after Setting Up

Be very careful when inspecting and checking the machine because there are places in the monitor with high electrical voltage.

Control circuits are all composed of IC's for long life, but on the other hand according to the way it is set up, these can be instantly destroyed; therefore, take special care with the following points:

1. Make sure the electric power is shut off when replacing parts or when removing connectors, etc.
2. PC board repairs are to be done by the seller — do not handle in any case. Above all else, never conduct test with the tester, etc. The voltage in the tester can ruin the IC's.
3. When connecting the connectors, be careful not to reverse the direction of the connectors.
When shipping PC boards use plastic airmats or other such protective material.
When pulling the electric power source, always hold the plug — never pull the cord.

Self-Test

The self-test is the same as the inspection of an automobile. If possible, it is best to do this each day. Rally-X has Self-Test capabilities and using the Test Switch most parts can be tested.

1. Automatic Self-Test

When the power in Rally-X is turned on the Self-Test automatically begins. If there is no problem in the PC boards it will change automatically into the "Attract Mode", when there is a problem the Self-Test is repeated and the words "BAD RAM" or "BAD ROM" will appear on the screen. Even if the problem cannot be located, do not go on to other test switches or volume test, but carry out the Self-Test using the Test-Switch.

Note: When the problem has been located using the results of the Self-Test, contact the place of purchase of the machine.

2. Self-Test Using the Test Switch

The slide switch on the opposite side when the selector switch is opened is the Test Switch. Turn the Test Switch "ON". The Self-Test will start (Normally this switch is OFF). The figures and words of the Test Mode will appear on the screen in 10 seconds.

RALLY-X TEST MODE

Game is in test mode for a moment immediately after power is turned on or when test switch is on. When test switch is returned to "OFF" the game goes into attract mode.

1. ROM TEST

The ROM data are checked 4K bytes at a time, and then checked together over all. If there are irregularities, the screen will display, for example, "ROM 1" or the like, identifying the bad ROM by number. The test series will not proceed to the RAM test. When there are no irregularities, "ROM OK" will be displayed and the RAM test will then be performed. The character ROM is not checked.

The position of the ROMs on the PCB
as given by the ROM test message

Test Message	Position of ROM and PCB		
ROM 1	1B or 1C	1B	1D
ROM 2	1D or 1E	1D	
ROM 3	1H or 1J	1H	1K
ROM 4	1K or 1L	1K	
	MB8516 (EPROM)	UPD2332 TMM333	UPD2364

2. RAM TEST

Each of the 12 ICCs numbered 2114 are checked and when any irregularity is found a message (e.g. RAM 1L) is displayed and the test series stops. If there are no irregularities tests of game sounds and switches can begin.

The RAM test is performed only on ICCs numbered 2114

Position of RAMs on PCB
as given by test message

Test Message	Position of RAM on PCB
RAM 1L	6C
RAM 1H	6A
RAM 2L	6D
RAM 2H	6B
RAM 3L	6K
RAM 3H	6J
RAM 4L	6L
RAM 4H	6H
RAM 5L	6M
RAM 5H	6F
RAM 6L	6N
RAM 6H	6E

3. SWITCH & SOUND TEST

The following sounds are made when switches are depressed:

SWITCH	SOUND
Coin sw 1, 2	sound made when coin is deposited
service sw	service sound
1 player start	start music
2 players start	music played before challenging stage
plyr 1 cntrl sw up	fuel warning
plyr 1 cntrl sw down	sound made when fuel added to score
plyr 1 cntrl sw right	sound made when special check pt cleared
plyr 1 cntrl sw left	sound made when check pt cleared
plyr 1 cntrl sw smoke scrn	sound made when bonus car received
*plyr 2 cntrl sw up	sound made when one full pattern is cleared
*plyr 2 cntrl sw down	BGM
*plyr 2 cntrl sw right	crash noise
*plyr 2 cntrl sw left	high score noise
*plyr 2 cntrl sw smoke scrn	sound of car running

*Applies only to table model

If player one and player two's smoke screen buttons are depressed at the same time, the display flip-flops and the smoke screen sound is made.

If the test switch is pressed to off and back to on within one second while the smoke screen buttons are depressed, a cross-hatch pattern will appear. In the table model one edge and in the upright model two edges of the pattern will not appear.

7K BAP CAN CAUSE LOSS of all color or all video.

SWITCH ADJUSTMENTS

METHOD OF PLAY (RALLY-X)		
SW. #1	SW. #2	
OFF	OFF	1 COIN, 1 CREDIT
OFF	ON	1 COIN, 2 CREDIT
ON	OFF	2 COINS, 1 CREDIT

SW. #8		
OFF	PLAY MODE	
ON	LOCKS PICTURE	

M051-00935-A014

PLAYING INSTRUCTIONS

- 1 or 2 persons can play.
- By moving the control level, “My Car” (blue) can be moved up, down, right and left.
- Avoiding barriers, use a smoke screen on the pursuing red cars.
- With the help of the radar screen touch the check points, clear and continue on. There are 10 check points per round, one of which is the Special Check Point.

- Check Point points

When cleared	Points
1st	100
2nd	200
3rd	300
4th	400
5th	500
6th	600
7th	700
8th	800
9th	900
10th	1000

- When an accident occurs (hitting a barrier or red car) you must start over from the first 100 points.
- When the Special Check Point is cleared, the points accumulated up to that time are doubled (the screen shows X2). Of course when an accident occurs, this score is wiped out.
- Fuel.....“My Car” starts off with a full tank (60 L.). When all check points are cleared, an additional 100 pts. is awarded for each 1 liter of fuel remaining. And, when a smoke screen is produced, the fuel decreases by 3 liters. When the fuel remaining reaches the 10 L. level, the fuel indicator turns red and a warning is sounded. When the gas is all used, the car's speed will gradually decrease and come to a stop.
- Challenging Stage - Rounds 3, 7, 11, 15....are “Challenging”, here 8 red cars appear but cannot run until the fuel in “My Car” is used up. Because “My Car” runs at full speed, it's fuel is soon gone. Clear all check points before the blocking red cars can move. When this stage ends, starting with the next round the scene changes to city streets.

RM 1,3 : 1 K 6 PIN SIP RESISTOR.

ALL CER. CAPS ARE AX. TYPE.

RESISTOR UNIT : OHM

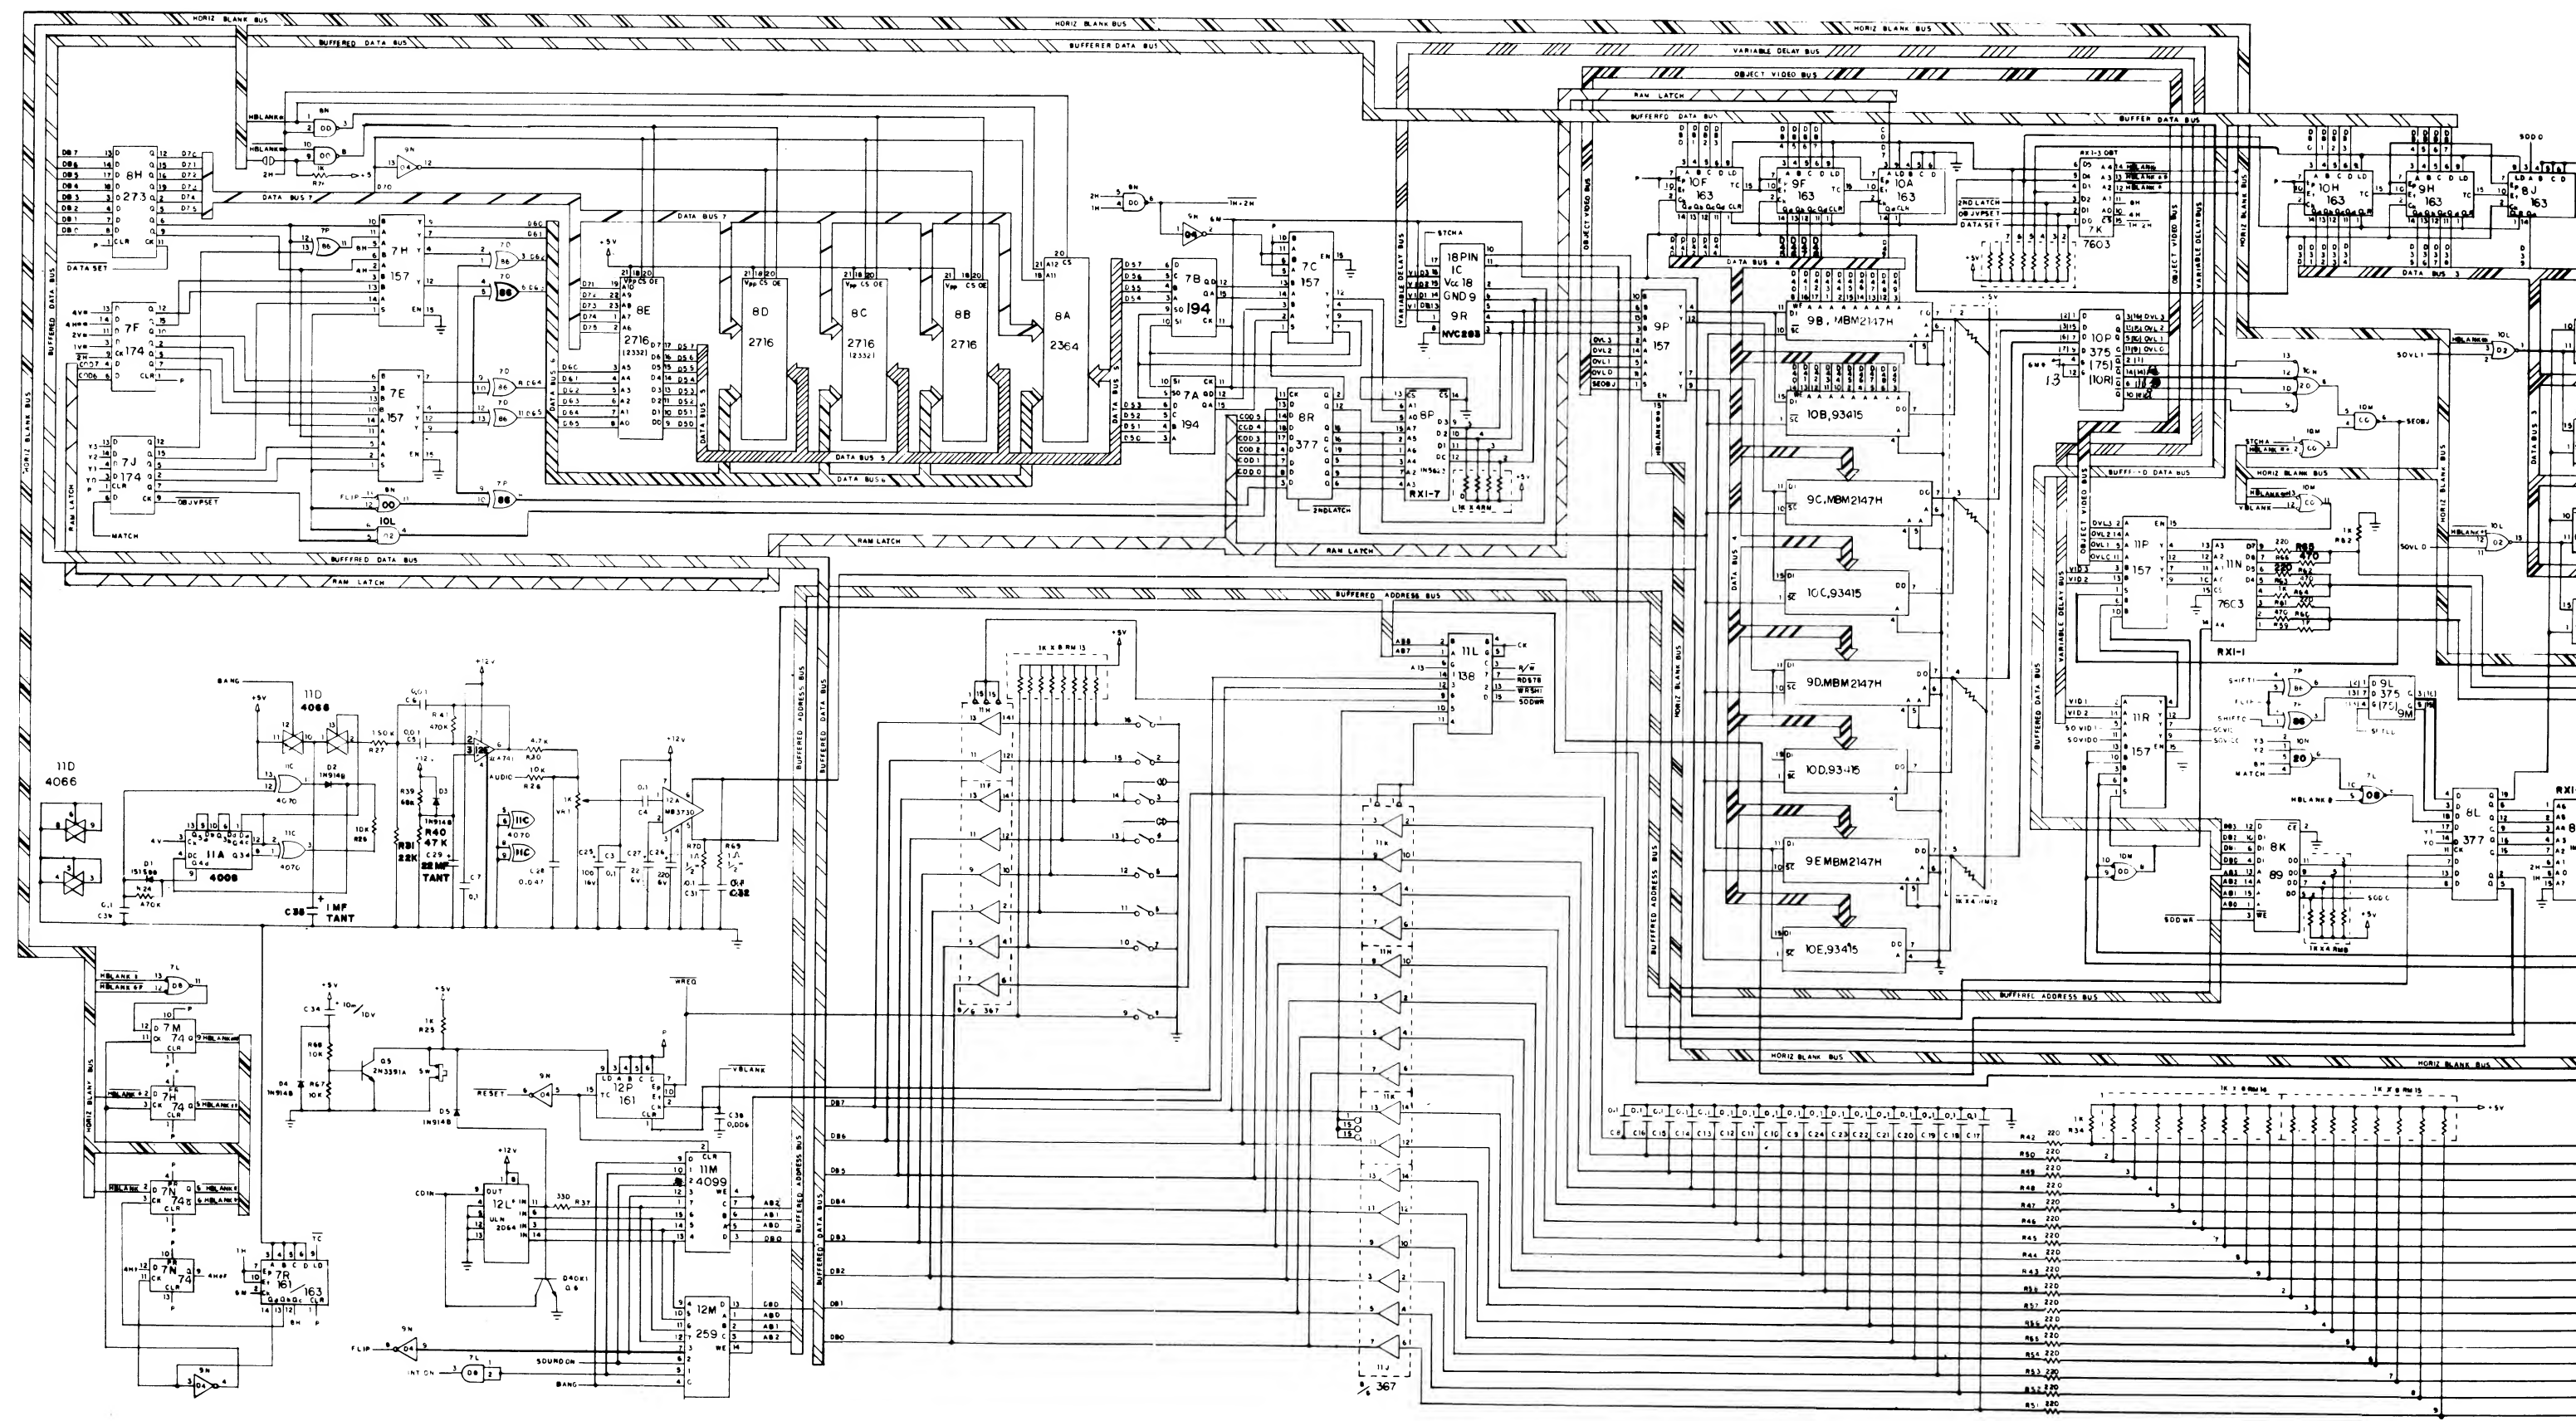

R100 3/4" STAND-OFF

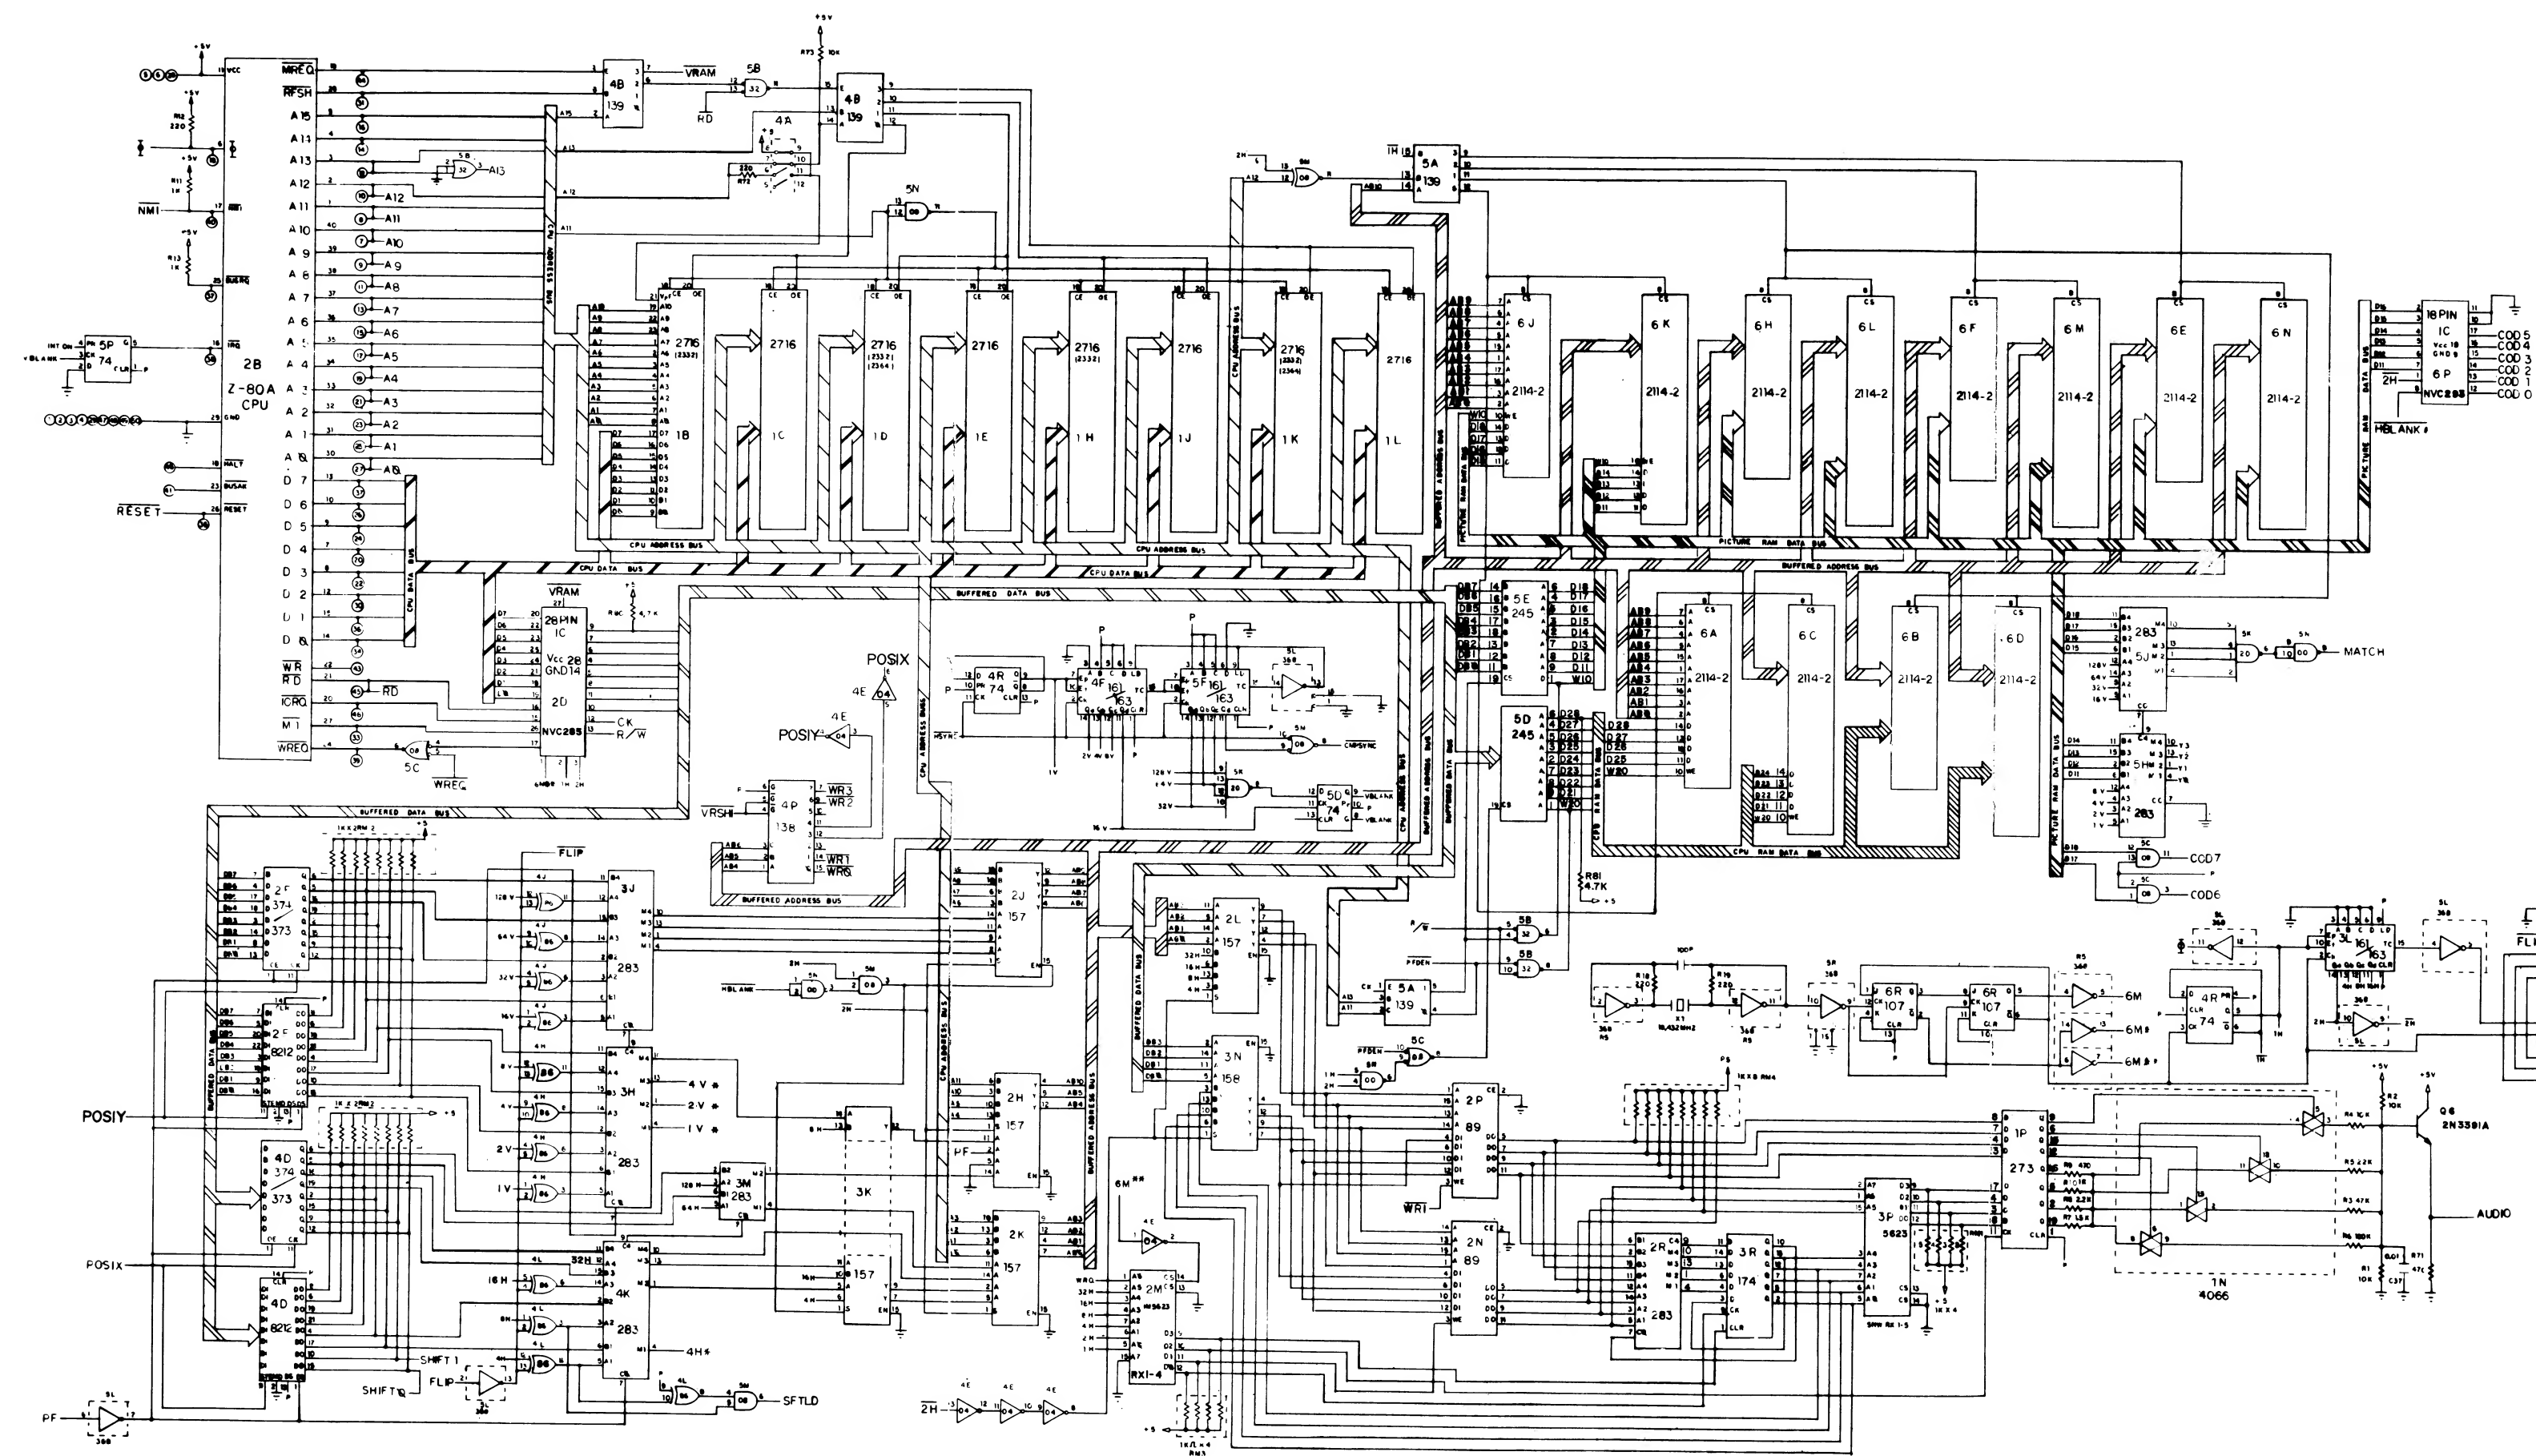

* NOTE : THIS LOCATION CAN UTILIZE EITHER
(A) CUSTOM CHIP NVC 285
OR (B) PLUG IN P.C. A082-9383-8000

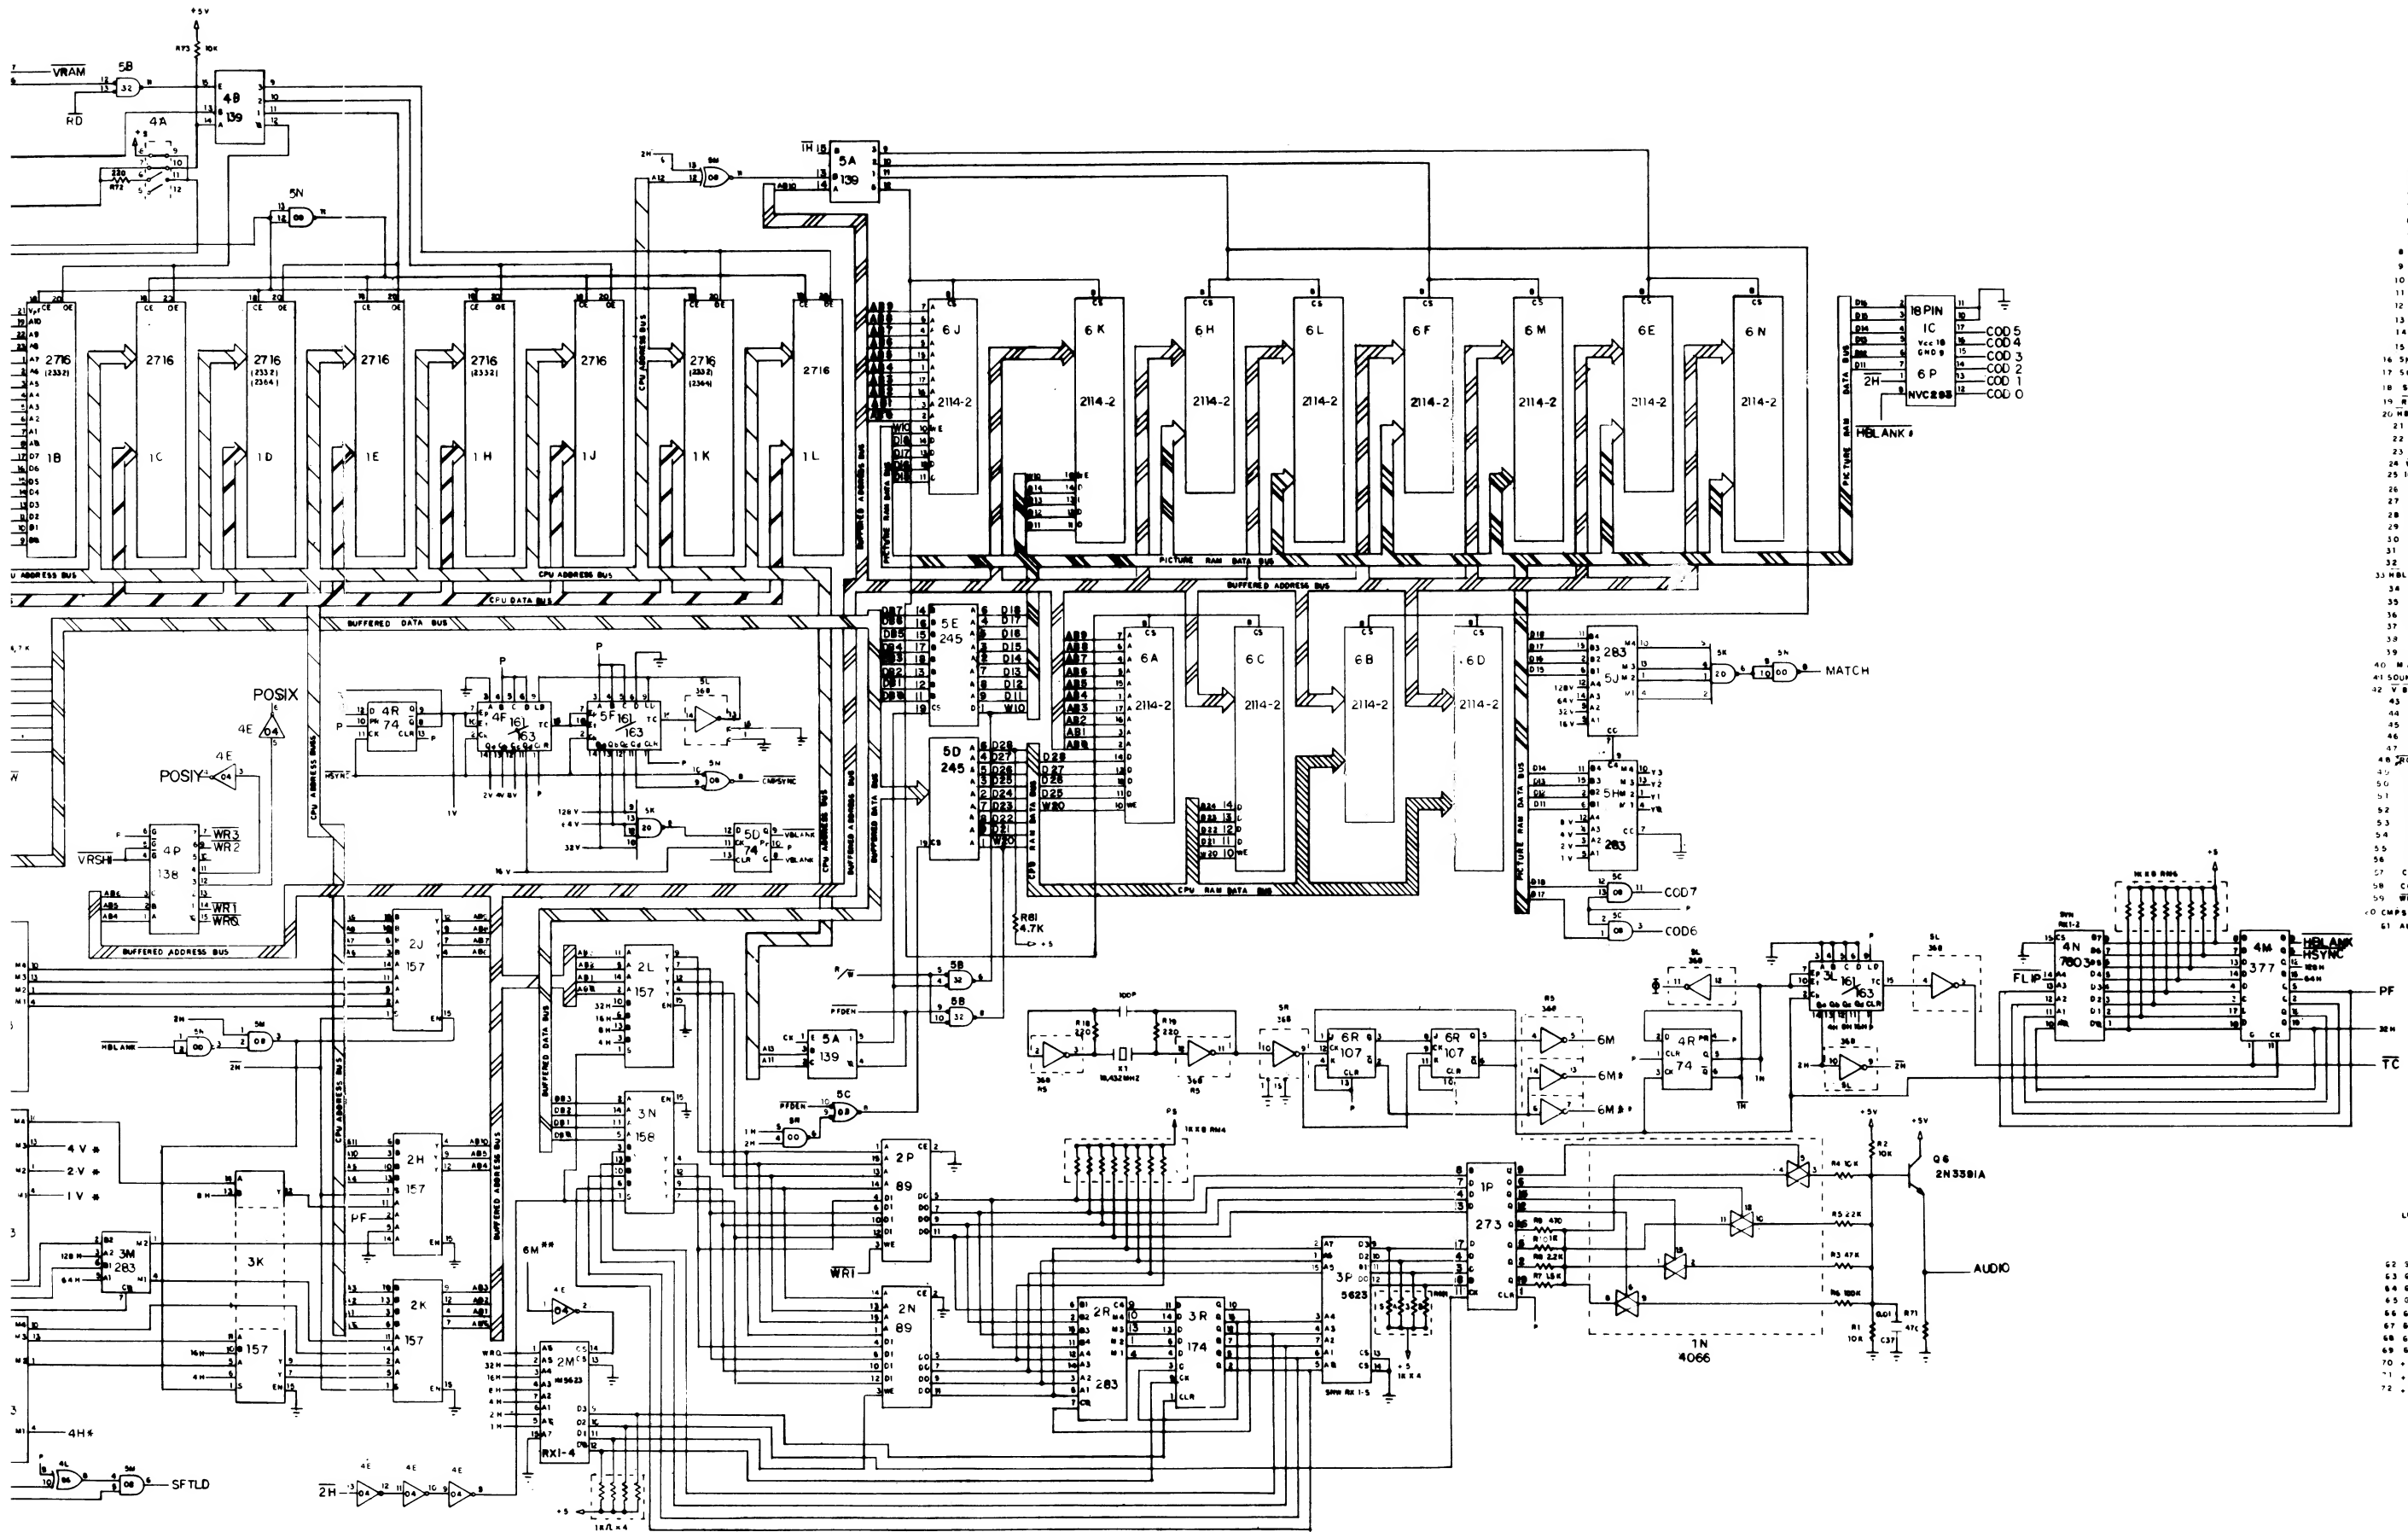

** NOTE : THIS LOCATION CAN UTILIZE EITHER
(A) CUSTOM CHIP NVC 293
OR (B) PLUG IN P.C. A082-9388-A000
VIDEO SHIFTER (293)

RALLY - X

Logic Board I A082-91385-C000

PART NUMBER	FUNCTION
74LS00	Quad 2 input Nand
74LS02	Quad 2 input Nor
74LS04	Hex inverter
74LS08	Quad 2 input And
74LS20	Dual 4 input Nand
74LS74	Dual "D" Flip-Flop
74LS75	Quad latch
74LS86	Quad 2 input exclusive or
74S89	64 Bit Ram 16 x 4
74LS138	3 to 8 line decoder
74LS157	Quad 2 to 1 line multiplexer
74LS161	4 Bit binary counter
74LS163	4 Bit binary counter
74LS174	Hex "D" Flip-Flop
74LS194	8 Bit shift register
74LS259	8 Bit addressable latch
74LS273	Octal "D" Flip-Flop
74LS367	Hex buss driver
74LS377	Octal "D" Flip-Flop
4006	18 Bit shift register
4066	Quad bilateral switch - Cmos
4070	Quad exclusive or gate - Cmos
4099	8 Bit addressable latch - Cmos
NVC293	Custom video shifter
A082-91388-A000	Video shifter P.C.
9332	4K x 8 Rom
2532	4K x 8 Eprom
IM5623	256 x 4 Prom
MBM2147	1K x 1 Ram
93415	1K x 1 Ram
82S25	16 x 4 Ram
7603	32 x 8 Prom - tri-state
741	Operational amplifier
MB3730	Audio amplifier
2N3391	NPN transistor
D40K1	NPN transistor
IN914	Diode

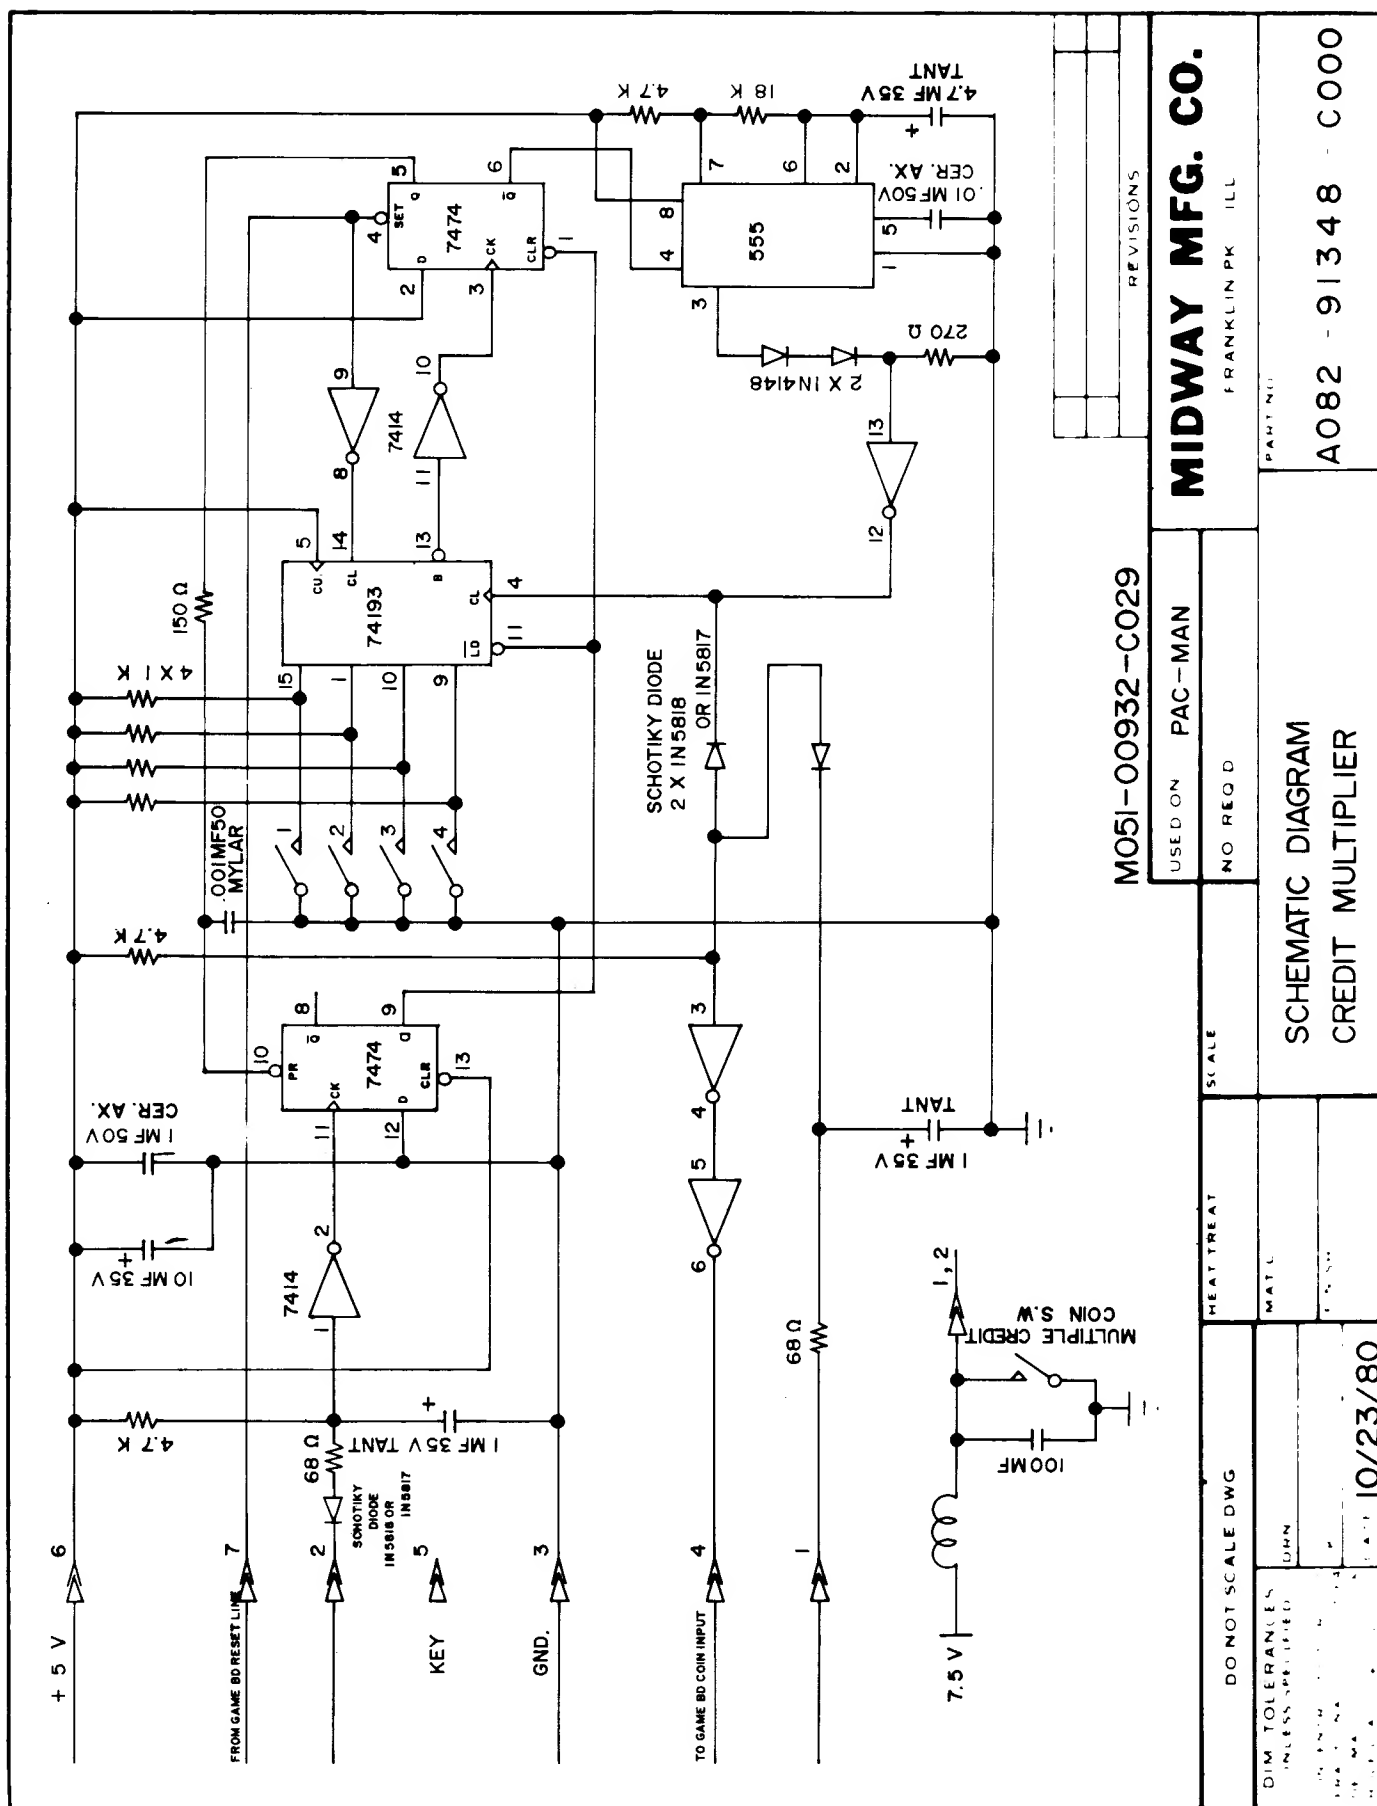

Logic Board II A082-91387-C000

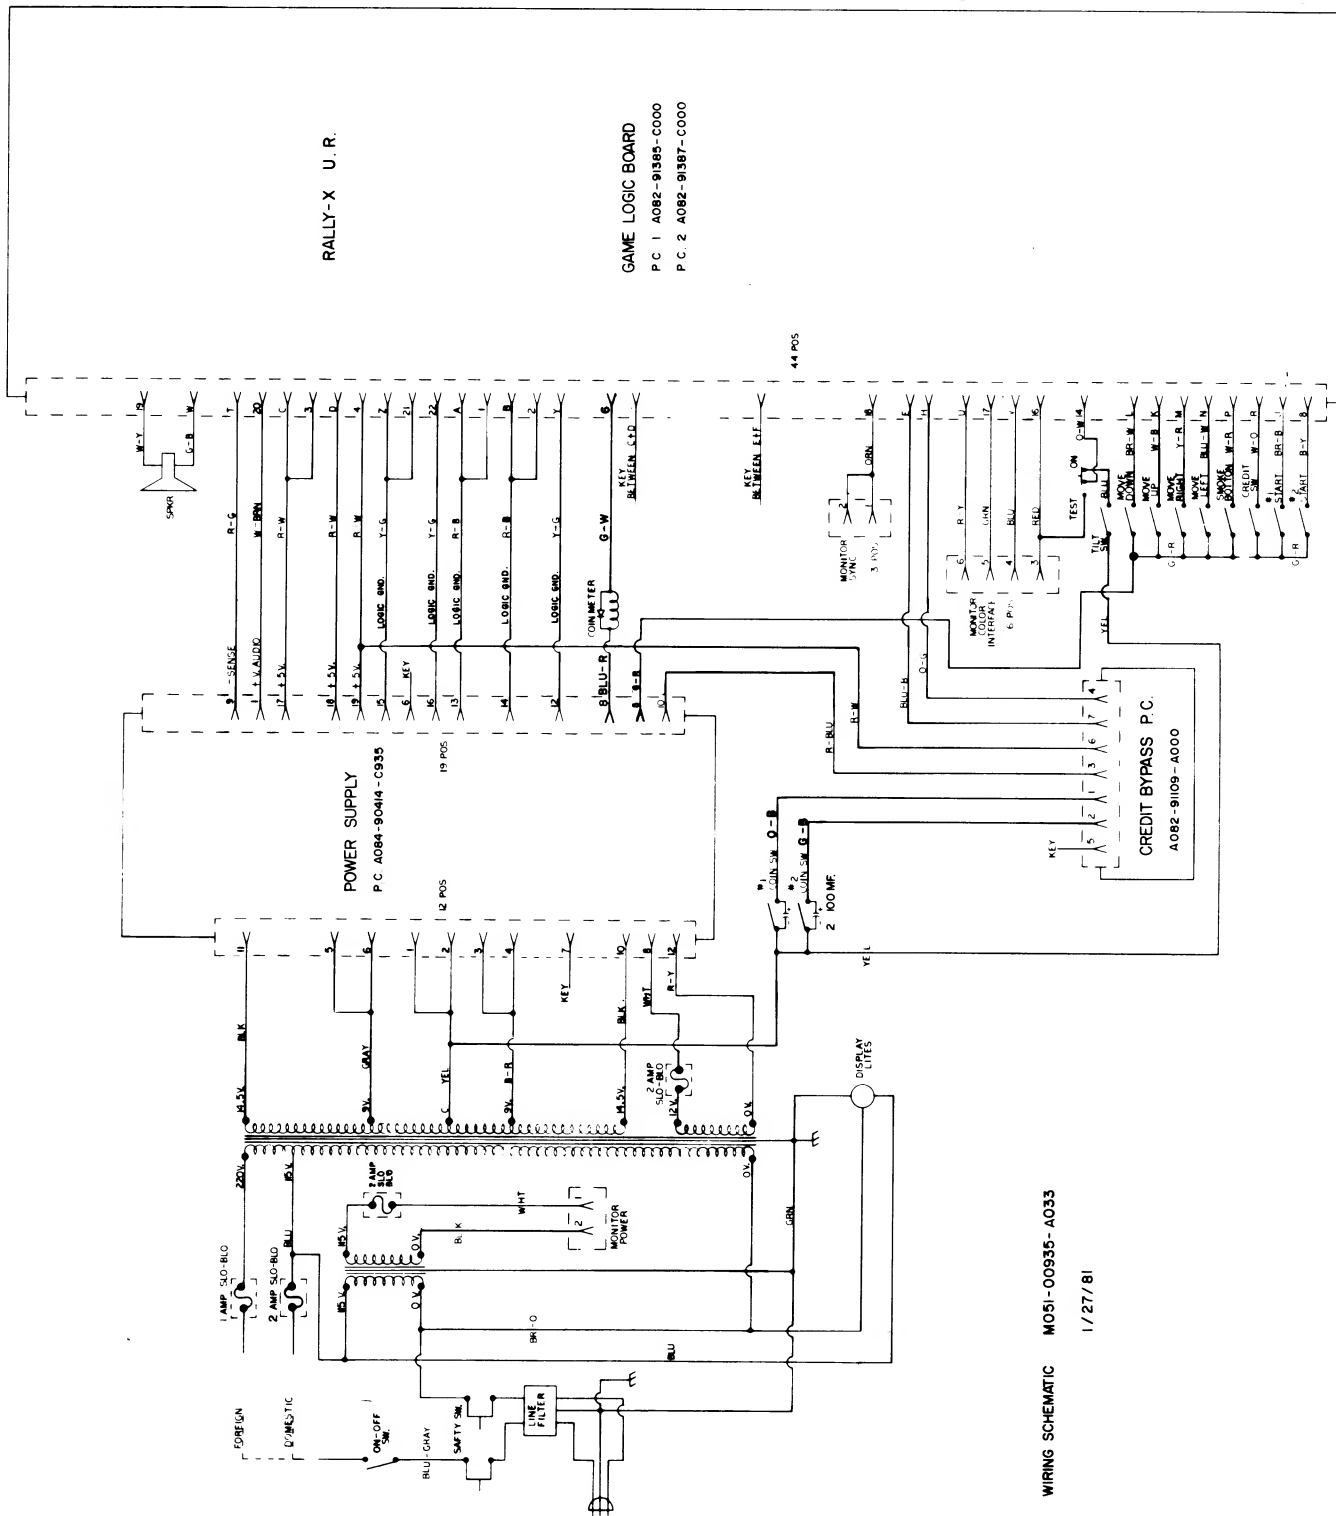

PART NUMBER	FUNCTION
74LS00	Quad 2 input Nand
74LS04	Hex inverter
74LS08	Quad 2 input And
74LS20	Dual 4 input Nand
74LS32	Quad 2 input or
74LS74	Dual "D" Flip-Flop
74LS86	Quad 2 input exclusive or
74S89	64 Bit Ram 16 x 4
74LS107	Dual "JK" Flip-Flop
74LS138	3 to 8 line decoder
74LS139	Dual 2 to 4 line decoder
74LS157	Quad 2 to 1 line multiplexer
74LS158	Quad 2 to 1 line multiplexer - inverting
74LS161	4 Bit binary counter
74LS174	Hex "D" Flip-Flop
74LS245	Octal buss transceiver
74LS273	Octal "D" Flip-Flop
74LS293	4 Bit full adder
74LS368	Hex buss driver - inverting
74LS374	Octal "D" Flip-Flop Tri-state
74LS377	Octal "D" Flip-Flop
NVC285	Custom Z80 sync buss controller
A082-91383-B000	Z80 sync buss controller P.C.
NVC293	Custom video shifter
A082-91388-A000	Video shifter P.C.
Z80	CPU
9332	4K x Rom
2532	4K x 8 Eprom
IM5623	256 x 4 Prom
7603	32 x 8 Prom - tri-state
2114	1K x 4 Ram
82S25	16 x 4 Ram
4066	Quad bilateral switch
18.432 mhz	Crystal
2N3391	NPN transistor
